

Garage and Shop - 21952

This customer did his homework before buying a building. He not only visited our booth at the Home Show and met with our Building Representative 3 times before making a final decision, he also (wisely) checked our record with Washington State Department of Labor and Industries. After doing his research, he finalized the building and it's accessories with our Building Representative and started the process.

After we had the engineered plans done we applied for the building permit. The permit process was smooth and we had his permit in hand in no time. Our building crew quickly put up his building and we subsequently poured the concrete floor and installed the garage doors. The project went up quickly, smoothly and without incident. The customer was extremely pleased that he did his homework and ended up with a quality PermaBilt® building.
