

Garage and Shop - 22385

A Sequim couple was looking to build a garage and workshop on a remote part of their property. Our PermaBilt® Building Representative surveyed their location, and equally important, their access road in order to bring in the necessary building materials and equipment.

After we obtained the building permit and with the site cleared, we started construction. One of the highlights of this building was a stylish porch design that ran the length of the garage and also wrapped around a corner to cover a PermaBilt® walk-in door. 18" Eave and gable overhangs with Town & Country® soffits along with gutters and downspouts were included. Additionally, our customers wanted to add a bit more style to their building by including a 4' perimeter wainscoting

Completing the building with garage and walk-in doors, the couple could hardly wait to start working in their new workshop.
