

Two Car Garage - 22396

The garage was building #2 that we build for this Mount Vernon client. Like many customers who come to PermaBilt®, he didn't want just any garage, but one customized to his needs in terms of functionality, design, durability and affordability. This included site location, colors, windows and accessories.

For example, his choice of a walk-in door was as our 4' x 8' split opening wood Dutch door with four galvanized T-hinges, one galvanized bolt, one galvanized gate latch, as well as one galvanized hook and eye latch. For the another door, he had a custom design in mind so we simply built the door frame allowing our customer to put in his special order door at his convenience. Overall, our customer was very happy with the final look and feel. He felt his new, classically-designed garage blended in nicely with his property and served the primary function of protecting and preserving his vehicles.
