

## Shop - 23228

Why rent when you can own. After meeting with our PermaBilt® Building Representative our client contracted us to build a shop on his property rather than continue leasing shop space. Our client was in the boat restoration business and the PermaBilt® team assisted him by custom designing the perfect shop for his business. There's a garage/shop style post frame building to fit any need. PermaBilt® starts with a detailed analysis that will meet space and aesthetic requirements according to the client's needs. Because post frame building walls are non-load bearing, doors and windows can be situated to fit many design possibilities.

With a site and design picked out, our client was pleased to learn PermaBilt® proudly offers an excellent financing plan. The plan has the best combination of low interest rates, low fees and customer service available. Like many others, our client saw the wisdom in financing through our lender. In short order his credit application and permit was approved and our construction crew was well on way to setting the posts for construction.

The shop's design included a sophisticated look by adding 3' steel wainscoting around the perimeter of the shop. The colors chosen made for an attractive building. The garage door is a 16' x 12' insulated raised panel and the (2) windows are 4' x 3' sliders with screens. A PermaBilt® walk-in door provides access to the shop. 18" Eave and gable overhangs and (2) 18" octagon gable vents are excellent accessory choices.

### Details:

- Building type: Shop
- Building size: 30' x 42' x 14'
