

## Barn – 24041

Our Roy customer called us after putting an offer on property in Roy. The property was everything they wanted, but did not have a barn for their animals. They knew they needed 4 stalls and knew they wanted a wood exterior. It took 4 meetings to solidify the other details, but they contracted for the barn just over a month after moving in to their new home.

The barn features (4) 12' x 12' PermaStalls which include 2" x 6" S/B tongue and groove wood walls, 7' high gridded stall fronts with gridded 4' x 8' sliding doors. The stalls each have a 4' x 8' steel Dutch door and also a feed door. Clients who choose our PermaStall system for protecting their animals love the strength, flexibility and safety record of our stall design. Every barn should have a tack room! Our clients tack is 12' x 12' x 8' with ½" CDX walls and ceilings. Of course one thing that makes this barn so appealing is the outer walls are made of board and batten 5/8" T1-11 trimmed with cedar. (2) 10' x 48' x 10' roof only lean-tos side the primary barn. Topping off this Pierce County Barn is a 4' x 4' cupola with red roof and horse weathervane.

As the picture attests our clients' desire was a 5 star barn and that's what PermaBilt® delivered. The building is a beautiful complement to the stunning home on 20 acres in this beautiful gated community. More construction details are on the following page.
