

Storage Building -23928

This customer called us looking for a building to house their 30' RV and their 20' jet boat, while also providing additional storage to house lawn and garden machinery and tools. We met with and spoke with this customer numerous times over the course of 6 years. When the design was finalized and the timing was right for the customer we wrote up the contract documents and forged ahead with getting financing approved, then permitting, then constructing the building.

The customer and the Building Representative worked together to design a building that met the criteria for shade and shelter while also complementing their primary residence and adding features to make it both functional and attractive. They chose a 16' tall building with 14' garage doors to ensure that all their toys would fit without issue. They also added overhangs to the building along with enclosed cedar soffits to match their home. The other feature they added was a 10'x5' porch cover with enclosed cedar soffits, a uniform look throughout -as shown in the photo.

In the end, the customer had protection for his valuable RV and boat, increased storage for his lawn equipment as well as a beautiful addition to his property.

Details:
