

12 Stall Barn -24023

Having built thousands of barns since 1973, PermaBilt® has the expertise and experience to customize barns to the needs of owner and horse alike. So when our repeat customer from Gig Harbor called about building a horse barn, our PermaBilt® Building Representative asked plenty of questions about size, layout, location, number of stalls, budget, doors, ventilation, etc. to make sure every aspect was covered.

The design ended up consisting of a long building with sliding doors on both ends and with 8 Perma Stalls on one side, and 4 on the other with a aisle way separating each row of stalls. The building also included plenty of ventilation including 3) 10' ridge vents and 2) 2'x2' cupolas with weathervanes to thoroughly ventilate the space. The building also has steel Dutch doors on one side to lead the horses directly from the stalls to the paddock.

This customer was a horse lover through and through. The customer built the building to house Arabian horses – her true passion. She currently breeds and raises Arabian horses out of the building and loves the new home her horses now occupy.
