

Garage and Shop - 24698

Our customer had just purchased beautiful property in Darrington when he called us wanting to add a shop and garage to his new property. He had a pretty good idea of what he wanted when he called: he wanted a large door in the middle with windows and entrances on either side of the door and engineered the posts so that he could build a second floor on both sides of the RV door in the future. He also added enclosed soffits to cover the underside of the overhang framing with steel. After meeting with the Building Representative the project moved forward into financing, permitting and ultimately construction. The building is a great addition to the new property.
