Horse Arena - 22379

As with many of our customers, they are so pleased with the quality and craftsmanship of their building, they ask us to build them another one years later on. Not so with one particular Rochester couple. They asked us to construct another building right away. In this case, a horse arena to match their horse barn that had just been erected.

As we all know, the Northwest during the fall and winter months can be overwhelming with rain. Of course, riding a horse in the rain and muck and squalor is not good for man nor beast. And that's why we were tasked of building them a horse arena. And like their horse barn, the most important aspect of building their arena was the safety and prosperity of their animals. Our PermaBilt® Building Representative went through the design process going over the smallest detail such as building orientation relative to the weather across sun, wind, rain and snow. Also, our Rochester couple wanted to be able to look outside their window and be able to see their barn and arena at the right angle. So we worked in those details into the site design.

It was these details that we attended to that gave our customers the confidence they needed to have us erect not just one building but two. And not just any building, but buildings that housed part of their family. Knowing that they were surrounded by quality gave our customers the peace of mind they needed.

Details:

- Building type: Arena
- Building size: 60' x 100' x 16'
- Location: Rochester, WA
- Accessories: 18" eave and gable overhangs
