

4 Bay Garage - 23936

Our Monroe client contracted PermaBilt® to build a 4 bay garage with shop on his property. He was impressed with a similar garage with shop PermaBilt® had built for a friend of his. Our client's desire was to have a the same style of post frame building on his own property. . One element he particularly liked on his friend's building was the different heights of the steel roll-up garage doors

The (4) garage doors were made up of (2) bigger 12' x 14' doors, (1) 10' x 10' and (1) 10' x 8'. Our customers have several choices as to their preference in type and style of garage doors. All doors our client chose were long panel with plain lite panels that added natural light to the interior. Key accessories for the garage included full perimeter 18" eave and gable overhangs to keep rainwater off where the roof and wall meet. To enhance the overhangs appearance, attractive enclosed soffits were added. These soffits come in a variety of materials and steel was the choice on this garage.

Once the 4" shop finish concrete was dry, our Monroe client was delighted to begin using his new investment for his projects in the shop and for the protection and storage of vehicles, both big and small.
