RV Garage & Shop - 26332

This returning customer acquired a new piece of property in Mason County and wanted to build a post frame building to house their RV with additional garage/workshop space. Given the confinement of the lot, we designed this pole building with a second-floor loft, not only to maximize the usable space in the building but also to give the customer a great view of the nearby lake. With the customer main home being across the street, they wanted to utilize the same siding material as their home to match the two. As shown in the photos above the gable end of this pole barn with the garage doors is Hardi plank wood siding, while the rest of the building is sided with 29-gauge steel! Our customer is thrilled to have the additional shop space and a dry spot to park their RV!
