Monitor Pole Barn Building- Shelton - 26917

We recently designed and built a beautiful monitor-style pole barn for homeowners in Shelton. They came to us wanting a classic barn look that could store their tractor and other equipment while blending perfectly with their property. We worked together to design a 34'x24'x10'/16' building with an 8' lean-to, combining timeless style with everyday function. The structure features wood Dutch doors and sliding barn doors, giving it that traditional charm our customers love. This building provides plenty of covered space for storage and easy access for equipment, all while maintaining that authentic barn feel. It's a great example of how a pole building can be both practical and full of character, built to handle hard work today and look great for years to come.
