Monitor Pole Building in Fall City 25407

Our returning customers wanted an additional pole building to store their vehicles and other equipment. They loved the Monitor style buildings and decided it would be perfect for this new structure. We designed a 36'x28' Monitor pole barn with three garage doors, plus a second-floor center loft. The building offers easy access to their vehicles and equipment while also giving them extra space in the loft. When completed, the building sits among the backdrop of trees and adds beauty and function to the property.
