Shop - Garage - Job#’s 26923

After purchasing a large property on Whidbey Island, our customers needed more space and decided to design two buildings to fit their needs. Working with one of our PermaBilt® Building Representatives, they came up with a plan that included this beautiful monitor-style building, which serves as their main garage and workshop.
The garage area is spacious enough to fit multiple vehicles, while the shop area features several windows to bring in plenty of natural light—perfect for working on projects throughout the year. The classic monitor design gives the building a unique look that fits in well with the other structure on their property.
The customers were thrilled with how everything turned out and love how this building not only works well for their needs but also looks great alongside their other building.
