Shop - Garage - Job#’s 26924

This is the second PermaBilt® building this customer has built on their property, designed to complement their original garage and shop. Working closely with our Building Representative, they created a modern single-slope structure that not only coordinates with their first building but is also tailored to be finished out as their living space. Featuring large glass doors, numerous windows for natural light, and covered porch areas at both the front and rear entrances, this building blends functionality with style. The customer was thrilled with how both buildings came together to enhance their property.
