Pole Building Shop – Gig Harbor - 27046

We recently completed this custom 40’×70’×16’ pole building for our customers in Gig Harbor, WA, who will be using the space for their flower design business. The building was designed to balance practical workspace with a clean, eye-catching appearance, featuring two 20’×20’×9’ bump-outs that add character and extra functionality.

Large insulated clear glass roll-up doors, full glass French doors, and multiple windows bring in plenty of natural light and help create an open, inviting atmosphere throughout the space. This project showcases how a custom pole building can be designed around a customer’s business while still making a strong visual statement on the property.
